Profile

Senior UX Designer with 9 years of experience working at a global enterprise software company designing enterprise software, mobile applications, and AI-driven conversational experiences. Expertise in user research, interaction design, prototyping, and conversation design, with a strong focus on solving complex product problems through research-led thinking. Currently leading the design of a multi-agent AI onboarding assistant, the first AI UI project at AMCS built using Claude Code with MCP integrations to Figma and Storybook. Proven ability to collaborate with cross-functional teams including engineers, product owners, and stakeholders to deliver experiences that meet business objectives and work for real users. Skilled in Figma, Claude Code, HTML and CSS, and well-versed in UX principles, usability testing, design systems, and user journey mapping. Passionate about the intersection of AI and user experience, and driven to design systems.

Work Experience

2021 - Present

AMCS
Limerick, IRE

AI Portal — Customer Hub

UX Design lead on a multi-agent AI onboarding assistant replacing a fragmented multi-step form with a conversational experience. Built and iterated directly using Claude Code. Developed UX agents trained on internal guidelines to generate consistent UI. Reduced target signup time from over 15 minutes to under 5.

Next Gen Mobile — Route Navigation

Led UX design for AMCS Mobile field operations app. Spent a week with a material management customer in Amsterdam riding collection routes and interviewing drivers and dispatch teams. Redesigning the core navigation model from individual job completion to GPS-driven street completion. Research directly contributed to the customer signing up to the full AMCS platform.

Design System and Vendor Workcenter

Contributed to the AMCS platform design system, defining component patterns and UX principles across multiple product teams. Designed the Vendor Workcenter, a net new module covering performance dashboards, compliance tracking, job oversight, and bill matching. Created AI-consumable design system documentation to support Claude Code workflows.

Work Education

2013 - 2017

University of Limerick

Bachelor in Digital Media Design

User Computer Interaction

Work Experience

2019 — 2021

Freelance
New York, USA

UX and Web Development

Freelance UX and web design across New York with clients including DGC Capital, Aris Renewable Energy, and StructureCraft. Work covered user research, interface design, branding, prototyping, and front-end development. Conducted interviews and testing sessions to establish brand direction and design foundations for web and digital products.

2018 - 2019

Freelance
San Diego, USA

UX Design and Branding

Freelance branding and design work across San Diego. Projects covered brand identity, logo design, brochures, merchandise, and website mockups. Worked closely with clients to establish visual direction from research and concept through to final delivery.

2015 - 2016

Sony Music
New York, USA

Operations Management Intern

Six month internship at one of the world's largest music companies. Responsible for quality control of video, audio, and graphic files across partner record labels. Supported client communications and daily operations, and built cataloguing systems to manage large volumes of physical and digital content.
